

HDPE Tank

Features round HDPE containers:

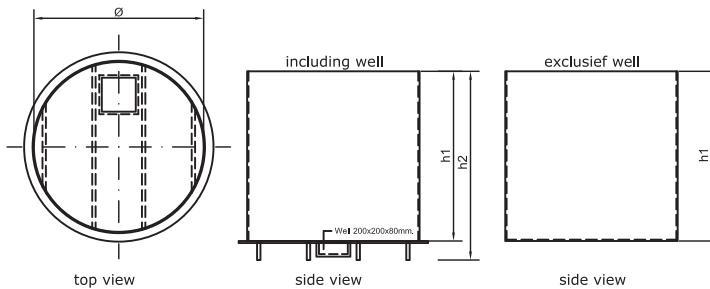

- Good chemical properties
- Strong and tough
- Suitable for food
- No water absorption
- Sterilizable
- Flat plate: temperature resistance 30 to 80°C
- Plate construction form: Temperature resistance from -10°C / +35°C (depending construction)

Standard round plastic containers of HDPE

The standard round plastic containers are available with or without lid. They are widely used as AB or Acid tanks in horticulture. The plastic containers are used for 100x concentrated chemicals drained and mixed with water.

Round PP - HDPE containers customized

If the standard containers do not meet your needs? We can offer all sizes of round or squared HDPE tanks.
